

BLE-ETHERNET- WIFI-CELLULAR GATEWAY

It accomplishes the three important functions:

Remote
Control

Simultaneous multi user
control

amazon alexa

Third party integrations
such as Alexa and
Google Home

The MeshTek Gateway is a BLE-WiFi-Ethernet gateway, with optional cellular connectivity. It allows users to control and monitor MeshTek devices from MeshTek iOS, Android or Web Apps. It allows local control and remote control when internet connection is available.

Features and Advantages:

Fast and secure IoT connectivity for data acquisition and visualisation

Multiple connection protocols supported

Control up to 1000 MeshTek devices in one to many networks

Retains schedule even with network outages

Ready backend server and optional cellular connectivity

Control, monitor, and schedule remotely with simple Web, iOS, and Android apps

General Specifications:

Input Supply Voltage	5VDC
Input Supply Current	1200mA
Protocols	Ethernet, Wi-Fi, BLE, Cellular
Open Air Control Range	Up to 200m
Certifications	FCC, IC
Operating Temperature	-10 °C to 60 °C
Dimensions	90x90x28 (mm)
